

Public models — reconstruction against released truth

model 1 R=1.12

released truth

convex stage

convex + flow (retrained)

ground truth

voxel 0.979 projection 0.993 → 1.972

voxel 0.955 projection 0.991 → 1.947

model 2 R=1.42

ground truth

voxel 0.911 projection 0.991 → 1.901

voxel 0.860 projection 0.982 → 1.842

model 3 R=0.88

ground truth

voxel 0.715 projection 0.957 → 1.672

voxel 0.733 projection 0.958 → 1.691

Model 1 is Vesta (near-convex), 2 the sawed-off cube, 3 Mithra — a contact binary, the only public body whose shape needs concavity.

Secret models — the seven that are scored

convex stage

convex + flow (retrained)

model 4 R=1.475

model 5 R=1.22

model 6 R=0.925

model 7 R=1.205

model 8 R=1.24

model 9 R=0.67

model 10 R=3.95

Where the score is going · public models, organisers' own measures

the voxel measure decides the competition

projection is saturated: it spans 0.02 where voxel spans 0.12

summed over the three public models (max 6): convex hull of truth 5.775 · convex stage 5.544 · convex + flow (retrained) 5.479
