

Public models — reconstruction against released truth

model 1 R=1.12

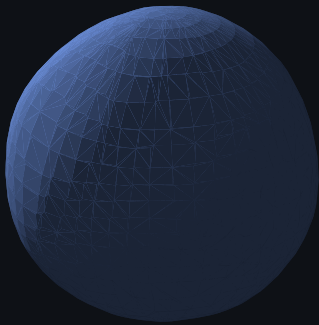

released truth

convex stage

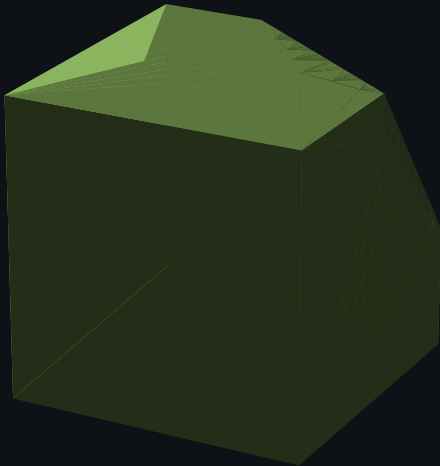

referee-selected (submission)

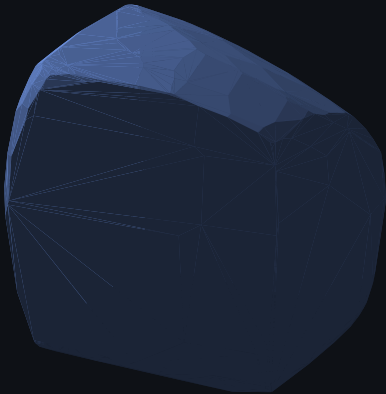

model 2 R=1.42

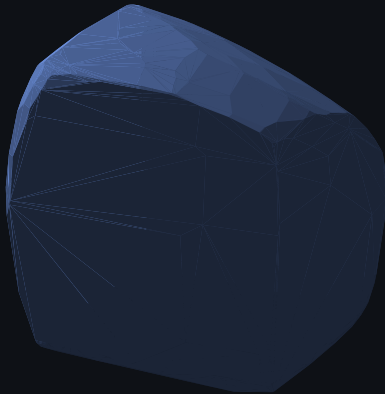

ground truth

no truth to score against

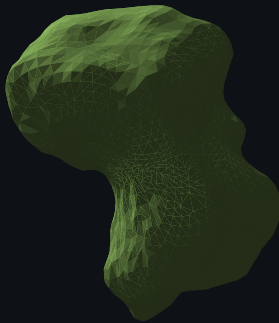

no truth to score against

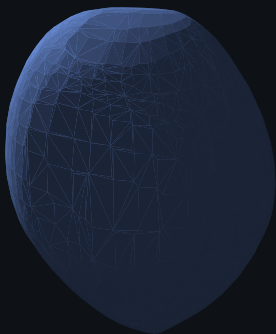

model 3 R=0.88

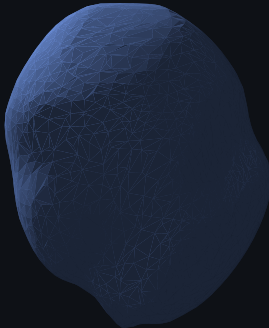

ground truth

no truth to score against

no truth to score against

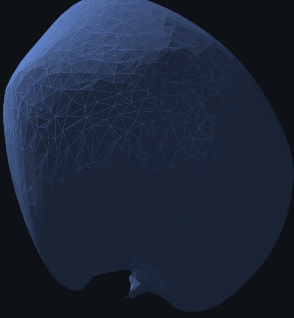

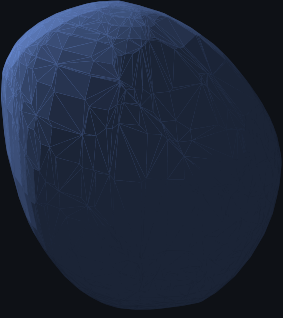

Model 1 is Vesta (near-convex), 2 the sawed-off cube, 3 Mithra — a contact binary, the only public body whose shape needs concavity.

Secret models — the seven that are scored

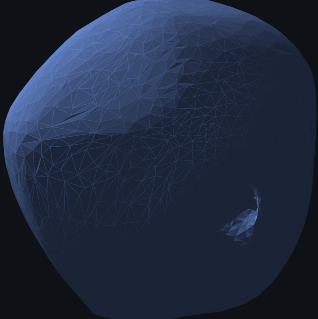

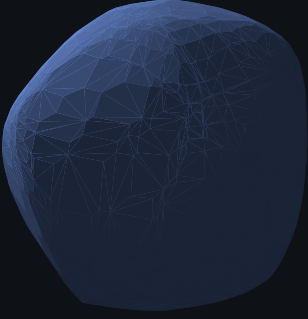

convex stage

referee-selected (submission)

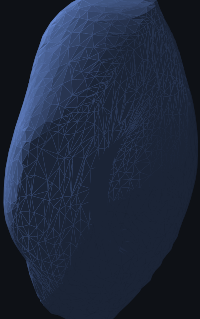

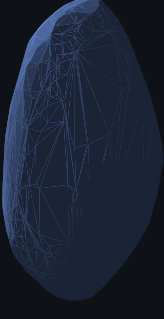

model 4 R=1.475

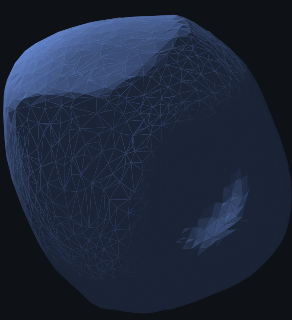

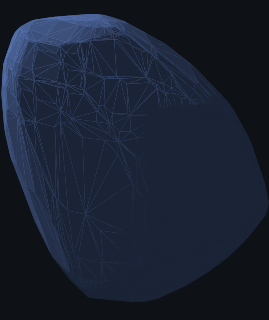

model 5 R=1.22

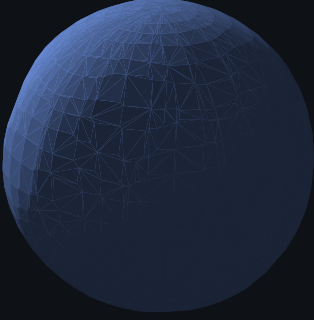

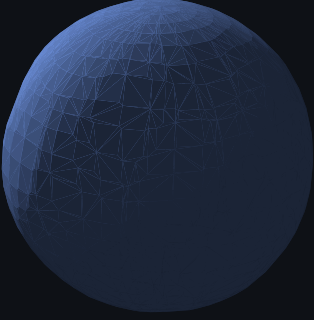

model 6 R=0.925

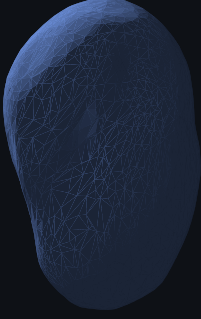

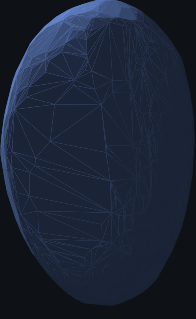

model 7 R=1.205

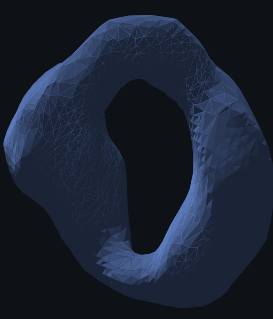

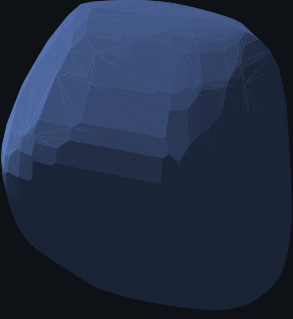

model 8 R=1.24

model 9 R=0.67

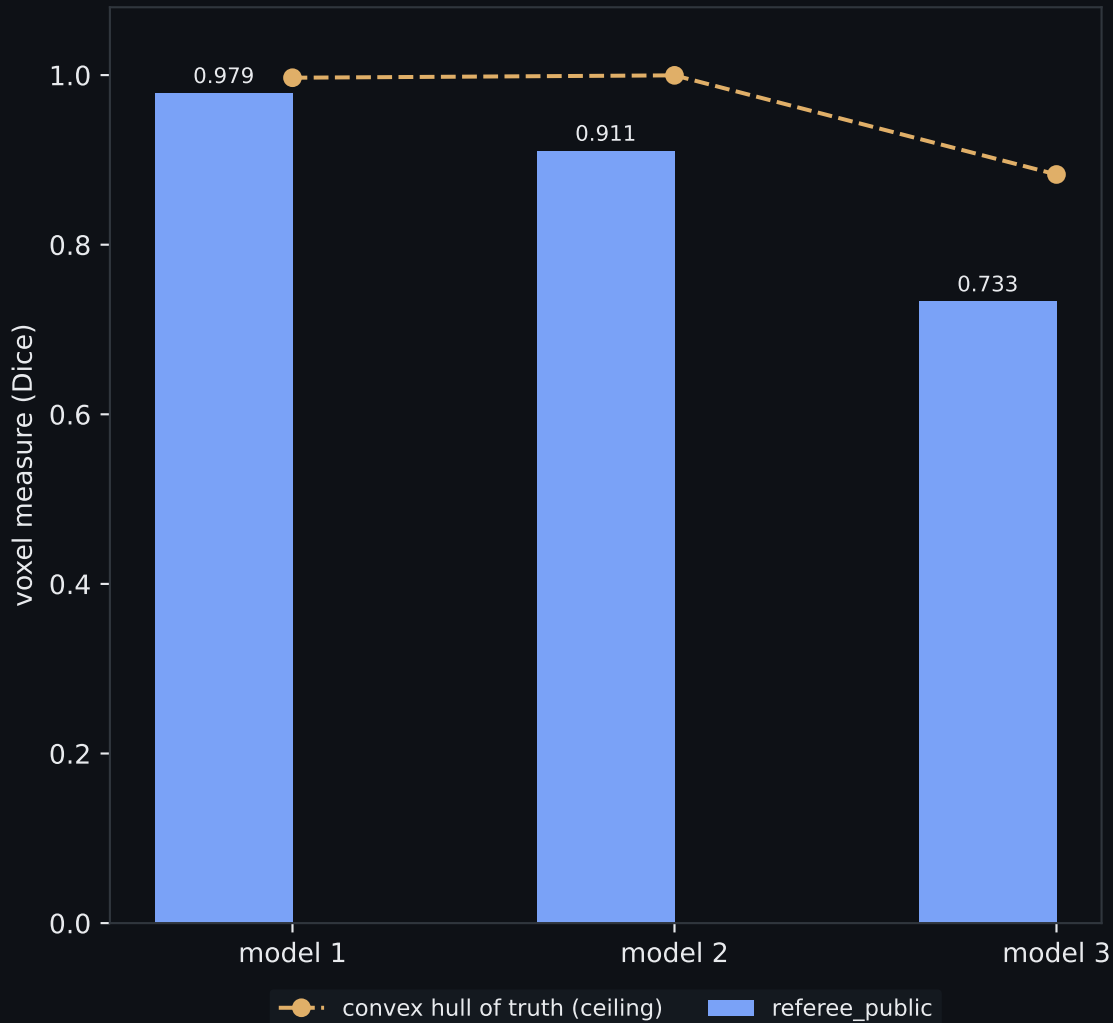

model 10 R=3.95

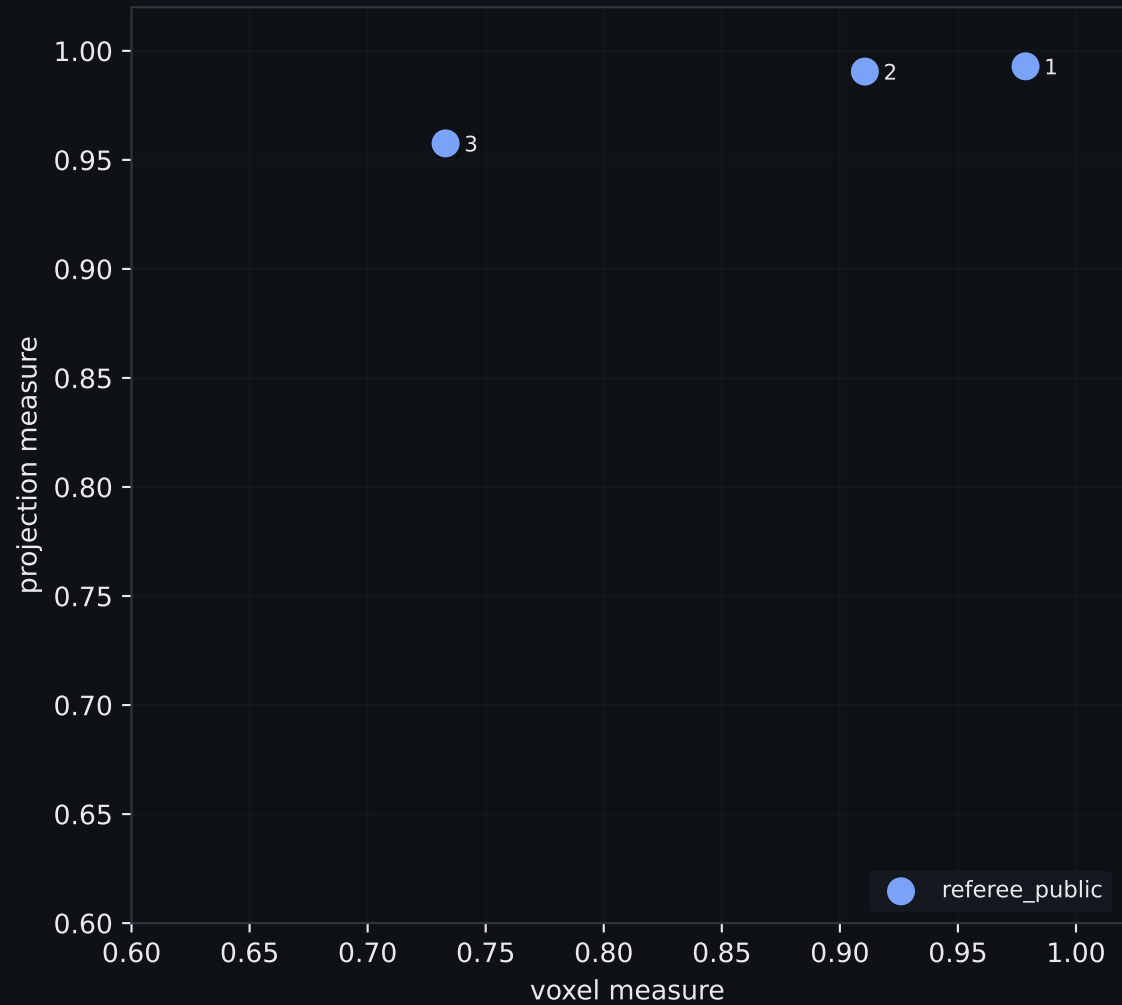

Where the score is going · public models, organisers' own measures

the voxel measure decides the competition

projection is saturated: it spans 0.02 where voxel spans 0.12

summed over the three public models (max 6): convex hull of truth 5.775 · referee_public 5.563
